

Abstract

Method for Processing Postal Goods

With a method for processing goods in an automatic reading system, for which an image of the address-containing surface of each item is obtained and transmitted to a first automatic evaluation and, in case of an incomplete evaluation of the address information, is transmitted to a first video coding for evaluation, it is provided that the address information of those images, which are not completely evaluated during the video coding, are transmitted to a further automatic evaluation by making use of the results of the video coding.
